Table II-46: WIOA Performance Indicators of Low-Income Adult Exiters who Received Intensive or Training Services, by State 131

GUIDE TO THE READER

The Low-Income Adult Data Book provides detailed information on low-income adults, who received intensive or training services, served by Workforce Investment Act (WIA) programs, including information about who is served, what services are provided, and the outcomes attained by participants. The Data Book is based on the Workforce Investment Standardized Record Data (WIASRD), which is an individual-level data set containing information reported annually by states to the Employment and Training Administration.¹ This version of the Low-Income Adult Data Book uses data provided by states in their Program Year (PY) 2015, Quarter 4 submissions, which contain information about individuals who participated in WIA at any time from January 1, 2014 to June 30, 2016. It thus includes individuals who finished participation (“exited”) from January 1, 2014 to March 31, 2016 and individuals who had started participation before July 1, 2016, but had not finished participation by March 31, 2016. All tables in the Data Book have been computed using the final version of the PY 2015, Quarter 4 WIASRD data, which includes a variety of data corrections and adjustments. Tables that show trends over time also use data from previous submissions.

The tables in this PY 2015 Low-Income Adult Data Book correspond to tables in the PY 2015 WIASRD Data Book. The difference is that in the Low-Income Data Book each table contains data only for low-income adults who received intensive or training services, while the PY 2015 WIASRD Data Book contains data for all persons served by WIA programs. The Low-Income Data Book contains some tables (Tables II-A, II-B, and II-C), which do not appear in the PY 2015 WIASRD Data Book. These tables compare low-income adults who received intensive or training services with all adults and with all adults who received intensive or training services. Because low-income status was collected only for adults who received intensive or training services until PY 2013, all reported low-income adults in these tables received only intensive or training services. Conversely, some tables in the PY 2015 WIASRD Data Book do not appear in this low-income Data Book.

¹ Detailed information about this data set, including the specifications that states were to follow when reporting, can be found in *Training and Employment Guidance Letter 14-00, Change 1*. Employment and Training Administration, November 19, 2002. <http://www.doleta.gov/usworkforce/documents/tegl/#14-00ch1>.

General notes that apply to most or all of the tables in the Data Book appear in this section. More detailed *Notes to Tables* are provided in Appendix A of the PY 2015 WIASRD Data Book. Those notes apply to this Low-Income Data Book with the additional proviso that all tables in the Low-Income Data Book (except Tables II-A, II-B, and II-C) include only low-income adults who received intensive or training services. Appendix C of the PY 2015 WIASRD Data Book provides definitions of the data items presented.

Overview of Tables

Most tables in the Data Book provide information on exiters. The most recent one-year period with complete data on exiters is the period from April 2015 to March 2016.

The Low-Income Data Book begins with a table showing trends in the number of low-income adult exiters who received intensive or training services by states. These are followed by tables showing the characteristics of low-income adults. The next group of tables shows the services received by low-income adults. The final group of tables shows the outcomes received by low-income adults.

Two primary groups of characteristics are shown: characteristics available for all exiters and characteristics available only for exiters who received intensive or training services. The data on low-income adults in this Data Book does not include low-income adults who did not receive intensive or training services. When comparing the information on low-income adults in this Low-Income Data Book with information on all adults in the PY 2015 WIASRD Data Book it is important to compare only with the data shown for adults who received intensive or training services.

Tables show characteristics, services received, or outcomes for WIA participants for the most recent year for which data on the particular characteristic, service, or outcome is available. The only exception to this is for the outcomes trends over time tables, for which the more recent time periods do not contain data for an entire year's worth of exiters for some outcomes. The exceptions are described in the notes at the bottom of these tables, as well as in Appendix A of the PY 2015 WIASRD Data Book.

None of the tables includes information on some other WIA Title 1 programs, including the Indian and Native American Program, the National Farmworker Jobs Program, veterans' workforce investment programs, and Job Corps. These other programs are not reported in the WIASRD data used for this Data Book, but in their own separate reporting systems.

Summary of Table Notation

In interpreting the data in the tables, the reader should note that:

- Data that is not available is shown as blank.

- “0.0” is used to denote percentages that are less than 0.05%.

Units of Measurement

The numbers appearing in the table are either raw counts (e.g., the number of exiters), percentages (e.g., the percentage who are female), or averages (e.g., average quarterly earnings in the quarter after exit).

- *Raw counts* represent the number of exiters identified by the combination of the row and column headings. Individuals with missing data on a row or column heading are not included in the count.
- *Percentages* generally represent the percentage identified by the row heading among all of those identified by the column heading—that is they are column percentages. Some tables, however, present *row percentages*, the percentage identified by the column heading among those identified by the row heading. These are specified in *Notes to Tables*—one example is Table II-25 that shows the percentage receiving different levels of service by state. Tables that show column percentages always show the number of exiters in the first row so that the reader can see the size of the universe on which the percentage is based. Tables that show row percentages always show the number of exiters in the first column.
- Individuals with missing data on either the row or column heading are excluded when calculating percentages. In addition, all outcome data exclude individuals who were institutionalized (e.g., in a hospital or prison) or deceased at exit or had a medical or health condition that precluded them from continuing WIA services or entering employment. However, these individuals are included in the number of exiters shown in the outcome tables.
- *Averages* are calculated for selected items that are measured on a continuous scale (e.g., quarterly earnings in the quarter after exit) and are computed after excluding missing data.

Quality of the Underlying Data

The WIASRD reporting system was first effective for PY 2000. Thus, the PY 2015 data used for this Data Book represents data from the sixteenth year of reporting. As with any new data system, states varied in how long it took to implement fully the different elements of the reporting system. Thus, the quality and completeness of the data varies among states, especially in early years. For example, the WIA common measures can be calculated from the WIASRD data and compared to data separately reported by states to ETA. This comparison showed that calculations of the entered employment rate and retention rate from the WIASRD generally were close to the data reported by most states. Thus, there is substantial consistency in the data on postprogram employment. However, there were larger discrepancies for earnings change, younger youth retention, and younger youth diploma attainment. These discrepancies have been reduced over time. When there are discrepancies, the states generally reported higher outcomes

than we calculated from the WIASRD. It is not known whether the WIASRD data or the state's calculations are correct when there are discrepancies.

The data set used to prepare the Data Book underwent an extensive data review. As a result of this data review, some data for a few states was recoded or set to missing when the data were clearly incorrect. Data that was set to missing are excluded from the calculations of percentages and averages in this Data Book, as discussed above. Consequently, state results reported in the Data Book may differ from states' own computations from their data.

Changes Over Time

Some new and revised reporting requirements were introduced with the PY 2005 WIASRD. Thus, this Data Book includes some data reported for the ninth time. These data may be incomplete. New characteristics data items included offender for adults, other eligible person as a category of veteran status, and ever in foster care for youth. In addition, Food Stamps was added to other public assistance. New services data include core self-service and informational activities, workforce information services and prevocational services for adults and dislocated workers, disaster relief for dislocated workers, and enrolled in education for youth. In addition, new categories for the type of training were reported for adults and dislocated workers. These new fields may be underreported, more so in the earlier time periods covered by the data. Please see the notes to tables for more details on some of the changes.

This Data Book incorporates some significant changes from the PY 2008 version. In several tables showing performance outcomes, the column for the employment and credential rate has been replaced by a column for the credential attainment rate. The latter shows the percentage of adult trainees who attain a credential, but is not one of the official WIA performance measures.

Additional changes were implemented beginning with the PY 2009, Quarter 3, WIASRD. In particular, that was the first time that data for adult and dislocated worker participants who have not finished the program were reported.

Some new and revised reporting requirements were also introduced with the PY 2013 WIASRD. Most new data items were incompletely reported and are, therefore, not shown in this report. Below we describe some new or changed data items that are used for this report.

Reporting for unemployment compensation was expanded to include adults that received only staff-assisted core services; previously unemployment compensation was reported only for those who received intensive or training services. Thus, this report shows unemployment compensation for all adults. For comparison to previous years' data books, this report also shows unemployment compensation for those who received intensive or training services. The same expansion was made for several other data items. However, reporting for those who received only staff-assisted core services was very incomplete. Hence, this report continues to show only data for those items for those who received intensive or training services.

Guide to the Reader

For services, there are additional categories for the type of training received, including Remedial Training (ABE/ESL – TAA only), Prerequisite Training, and Apprenticeship Training. These new categories are shown in the report but may be under reported.
